

New Frontier of Education and Research in Wind Engineering

Name and Stand
Yi Hui
Global COE Ph. D
candidate

Hometown
Baotou, Inner Mongolia,
China

Profile
Study
I earned Master degree at
Beijing Jiaotong University
in 2008
Work
Worked one year as a
structure engineer in a
structure design company

Contact
hui@arch.t-kougei.ac.jp

I studied about a particular kind of temporary structure. Studied the components' properties of this kind of temporary structure system, including the column, beam, diagonal, and also the joint. And also studied about different kind of structure system assembled by it, like temporary stands, bridge and also scaffolds and so on. This study has very basic and important preparation for the future applications of this kind of structure systems. I also joined the projects of designing and construction of several temporary stands and bridges for Beijing 2008 Olympic Games.

During the year I worked I joined a project for designing a giant shopping mall, including a huge long span steel structure, which is very difficult and important project in Beijing.
